CPC Test ...

KCRV-1370 - P. O. Box 9 - Carruthersville, MO 63680 will present a special DX Test Monday morning October 28 at 0615 ELT. The test will include tones, music, Morse code, and voice. Address reports to Mr. Cleat Stanfill, General Manager. Arranged for the NRC by the Colorado CPC Machine.

From the Publisher ... I hope you like the new, cleaner look of DXN. I've changed some things not for just the sake of change, but to make the magazine more readable and legible as well as able to include more information for you. We'll be working with the regular columnists and other regular contributors so that the appearance of DXN is more uniform. For example, both this page and DDXD-E is set in 13-point Times. (reduced to 59% by the printer). On the other hand, I had to squash the index quite a bit to get it to fit, and it may not be as legible. The point is that we're trying to use the available technology to its utmost to bring you a better product while not raising dues. I'd appreciate some feedback from those whose eyes aren't as sharp as they used to be as to the legibility of DXN.

It looks as if we'll have access to an MS-DOS computer which can convert ASCII files from 5.25" disks to 3.5" disks. But we still need volunteer typists occasionally to type up material and save it to one of the following formats: MS-DOS 3.5" or 5.25" disks, in almost any Macintosh word processor (MS Works or Word, MacWrite II, WriteNow 2.2, or even TeachText), Commodore 64 (Mirage or ASCII), or Apple (5.25" or 3.5", Appleworks or ASCII). Accordingly, any contributions forthcoming in elite type will be held until we can retype it.

With the start of the new volume, I'd like to take a little space to say thanks to all NRC members for making the club the great organization it is. A special thanks also to those of you who have written thank-you notices to me in the past, although I must point out that

I really am more of a "filter" than anything else, and that the real gratitude should go to the column editors and other contributors who keep sending in material. Thanks also to those who send station logos and clippings. Nearly everything eventually finds its way to print. And, yes, I'm still having fun!

We're into the weeklies now, so crank up those receivers and report what's going on in DX land. Keep it current, though. 73 - pls.

DX Time Machine

From the pages of DX News

50 years ago ... from the Oct. 4, 1941

DXN: A list was published of the BCB stations in Australia and New Zealand.

Also, one page of "Rules of the National Radio Club;" membership dues were \$2.00 per year.

25 years ago ... from the Oct. 1, 1966 DXN:

Allen Merriman headed the CPC, Russ Edmunds the Verie Signers List, and Steve Weinstein, Contest. Dues were \$5.00 per year.

10 years ago ... from the Oct. 1., 1981

DXN: Tom Farmerie penned a request for information for the 50th NRC Anniversary book. Dues were \$18.00 per year.

CALL LETTER CHANGES

Old call:

830	WKTX	OH	Cortland
900	WBXT	OH	Canton
	CFBR	ON	Sudbury
950	KRXX	AK	Seward
1230	WEEX	PA	Easton
	CFLK	ON	Kapuskasing
1340	KTEO	TX	San Angelo
	CFLH	ON	Heyst
1480	KDBN	TX	Dallas

New call:

WKTD
WCER
CHYC
KSWD
WODE
CHLK
KCRN
CHOC
KCMZ

APPLICATIONS / GRANTS FOR NEW STATIONS

None

APPLICATIONS FROM EXISTING FACILITIES

1480 WCIN OH Cincinnati: reduce powers to 1000/114 watts, antenna to U1

GRANTS TO EXISTING FACILITIES

None

OTHERNESS

530 CIAO ON Brampton: station has been testing here even though CJFT is still operating on this frequency. Expect CIAO to move here from 790 kHz for good by the end of the year.

830 WKTX OH Cortland: station returned to the air 9-19 but was noted off all day 9-21, don't know what is exactly happening here but by the time this reaches you this station will be ON THE AIR. By the way, they were using this call, not the new WKTD as noted under Calls above.

KBUC TX Cibolo: silent for a few weeks, this station is ON THE AIR again.

900 WCOR TN Lebanon: station is SILENT

910 WQZZ TN Columbia: was silent as WQMG Lawrenceburg, TN, station is ON THE AIR from new city of license.

WWWR VA Roanoke: silent station is ON THE AIR

980 KICA NM Clovis: silent station is ON THE AIR

1120 WOGM TN Maryville: station is again SILENT

1220 KRGO CA Fowler: silent station is ON THE AIR

1490 WECM FL Milton: silent station is ON THE AIR

WJOC TN Chattanooga: silent station is ON THE AIR (and features an all sports format, thus the new call)

1500 KRBN TX Boerne: station is SILENT after suffering major varmit-induced transmitter damage, may be off for several months.

1550 WAAJ AL Huntsville: silent station is ON THE AIR but is maintaining a sporadic operating schedule. They operate on listener donations and are on the air only as funds permit.

1570 KTAT OK Frederick: station is SILENT

THANKS: John Bowker, Mike Riordan, Eugene Hinton, Dale Hamm and M Street Journal

73 and Good DX, *Jerry & BKF* Jerry Starr & Buffalo K. Fooman

DX News Index to Volume 58

MEDIUM WAVE RAMBLINGS

- Some great loggings were received here too late for last issue, and would have been way too old for this issue, so have been edited out. It's unfortunate this happens. My deadlines are clearly made known to one and all. Loggings which will be older than six weeks at date of DX News publication are edited out. Actually, I'm pushing it with a few this time. Arghhh.
- Thanks to **Dave Evans** of Brossard, Quebec, I have in my hot little hands (actually in the cassette player) a recording of a few moments of what was CFCF's final hours... as CFCF. Dave notes that CFCF was possibly North America's first radio station, with history going back to 1919. CIQC (the new calls) will be Montreal's first full-time country station since about 20 years ago. A few more details in Special below. Thanks for the news and the tape, Dave! By the way, Dave drove to the U.S. to mail the envelope (strike up there, you know) and it got here in two days!! I heard the comment on Radio Canada that the reason postage is so high there is that they charge for storage.
- Just received my new NRC Radio Log. It's a dandy! Get yours today. And yes, I paid full price for it.
- Rick Dau** is having a GTG (that means *get together* for the uninitiated) in Sioux City, Iowa on October 25 and 26. Watch for more details from Rick, but plan now to attend.

SPECIAL

- 600 CIQC PQ MONTREAL** - 9/9 0001 has changed to these CLs and C&W mx (ex:CFCF and NOS); they have dropped Larry King overnight in favor of the music format; the ratings were not what the owners wanted, and with C&W are targeting a new demographics, per Montreal's Gazette (DE-PQ)
- 790 KKBQ TX HOUSTON** - new format is **Easy Country** (GK-TX)
- KFYO TX LUBBOCK** - 9/10 2232 ID as 79 Stereo, KFYO, Log doesn't indicate \$ (MH-NE)
- 800 WDSC SC DILLON** - has been running ETs since 8/3 @ various times of the day, 1000 watts day/500 PSA & 382 night; sked will likely be NSP once it gets on RS (likely by the time you read this; I know, I rebuilt this one-hi! (DS-DE)
- CKLW ON WINDSOR** - now carries **NBC News at :00** (REH-ON)
- 880 KJOJ TX CONROE** - heard simulcasting KJOJ-FM (GK-TX)
- 900 WKDW VA STAUNTON** - 9/12 0230 is now on the IRN with The Fred Sanders Show; unn. (REH-ON)
- 1040 WMTX FL PINELLAS PARK** - 9/6 2035 good in WHO null with AC and contest promo mentioning The phrase that pays: Mix 96 means music, legal ID a little early @ 2053: WMTX-FM Clearwater, WMTX-AM Pinellas Park; ex: **WHBO** (REH-ON)
- 1190 KJLA MO KANSAS CITY** - 9/8 0710 not silent anymore; hrd ID and NOS (MH-NE)
- 1210 WKNX MI FRANKENMUTH** - 9/5 1300-1400 with BBD, now simulcasting full time with FM sister **WGMZ**; legal IDs now include both stns (TS-MI2)
- 1460 WXEM GA BUFORD** - 9/9 1945 poor but alone in EE with dual sign-off for WXEM and WAOS-1600 in Austell, GA; format is now **SS**; ex: **WLKQ** (REH-ON)
- 1480 KDBN TX DALLAS** - now programming **Transtar EZL** mx; possibly a change of CL forthwith since "DBN" obviously meant Dallas Business News (GK-TX)
- 1500 KJIM TX SHERMAN** - 9/12 1930 new sign-off IDs Sherman-Denison with KJIM Gospel Radio is owned by H.E.S.A (?) Inc. It's broadcast towers located at Radio Center on Woodlake Road between Sherman and Denison. KJIM is owned and operated by Wilson Broadcasting on an assigned frequency of 1500 kHz with a power of 1000 watts with studio offices located at Austin College in Sherman, phone # for that college is 214-893-3916 (JB-TX)

BOTH/BLEE
FM 97.7 AM-1480

Ottumwa

- KANI TX WHARTON** - 9/15 1934 format change from **C&W to GOS**; ID is The new inspirational station, we're Great Gospel KANI 1500 AM (JB-TX)
- 1530 WWGZ MI LAPEER** - 9/6 1600-1700 with C&W; is now **Country Gold 1530**, no longer @ 103.1 FM; all-live, locally-originated programs (great!) (TS-MI2)
- 1590 WCZN PA CHESTER** - sked is now **0600-2100**, unless they have a local remote which runs past that time (DS-DE)

UNIDS AND UNID HELP

- 530 CJRN? ON** - 9/15 0355 MUZAK-type mx, with stronger signal than usually heard from CJFT; 0400 This is radio station CJRN loud and clear; Log sez CJRN is in St. Catharines on 710, only a few miles from Fort Erie; disappeared shortly after call ID; anyone know something about this? (JH-PA) [CJFT relays some of CJRN's programming on 530 - Ed.]
- KTWA**
Ottumwa
- 580 UNID ??** - 8/31 0105-0125 oldies with The Great 58 heard (BP-NC)
- 970 UNID ??** - 8/12 0210 weak with satellite AdCon @ KCJJ-1560 (RD-IA)
- 1120 WBIS CT BRISTOL** - this is **Chuck Reh's** mystery station from the August 26th issue; they are listed on the 1991 Sports Final network (RD-IA)
- 1260 WNDE IN INDIANAPOLIS** - is **Scott Barnett's Q-95** unID of 8/1 (Issue 29); is @ WFBQ(FM)-94.7 mornings (REH-ON)
- 1590 UNID ??** - 8/23 2140 weak with Dallas Cowboys FB; anyone in the Lone Star State know who this might be? (RD-IA) [I wouldn't ID either if I were them carrying the Cowgirls, hi - Ed.]

TIS AND OTHER STUFF

- 1280 CFYZ ON PEARSON INT'L AP** - has moved here from 530; signs on hwys to airport changed, but haven't heard them here yet (DT-ON)

MIDNIGHT TO 0600 HOURS ELT

- 550 WDUN GA GAINESVILLE** - 9/3 0028 WDUN, Gainesville, your local news and information leader, Larry King - ads and promos; over WKRC (BP-NC)

8 International DX Digest

Foreign DX Catches. Times are UTC; for ELT, subtract 5 hrs.

Mark Connelly made it just under the DXD deadline wire with his loggings from Rockport. It's nice to see some Africa loggings. See if you can find the one logging he didn't submit!

Deadline for all loggings is the Saturday before the Friday deadline in Topeka.

Jim

PAN-AMERICAN

640t GUADELOUPE Arnouville 0003 9/12. FF talk by man, most likely Guadeloupe. Eastern Caribbena cx good at the time. [MC-MA]

670 CUBA R. Rebelde 0417 7/22. Sonido Rebelde slogan, SS pop mx. [MC-MA]

705t ST. VINCENT 0413 7/22. Open carrier at this time. [MC-MA]

740t PUERTO RICO San Juan 2328 9/11. WJAC suspected w/SS talk, nx about Puerto Rico and Dominican Rep. [MC-MA]

760 CUBA R. Reloj 0155 7/23. Reloj program in jumble. [MC-MA]

780 BRITISH VIRGIN ISLANDS Roadtown. Tertola 0007 9/12. ZBVI good at times w/calypso mx, Carib EE DJ w/echo chamber. Battling R. Coro and other unID SS. [MC-MA]

800 NETH. ANTILLES Bonaire 0009 9/12. PJB good w/EE religious talk; o/SS LA's. [MC-MA]

810 COLOMBIA Bogotá 0408 7/22. HJCY atop channel w/Colombian nx (frequent Bogotá mentions). [MC]

825 ST. KITTS Basseterre 2313 9/11. Fair to good w/preaching in EE. [MC-MA]

830 VENEZUELA San Antonio de los Altos 0403 7/22. YVLT noted w/Venezuelan anthem and s/off o/u Canadian. [MC-MA]

880t VENEZUELA 0011 9/12. Caracas likely w/SS talk mixing w/WCBS. [MC-MA]

895 NEVIS 0012 9/12. Poor w/pop mx. [MC-MA]

910t VENEZUELA Maiquetia 0015 9/12. SS nx w/mentions of Venezuelan cities; no ID given. [MC-MA]

Jim Renfrew

61 Wilcox Street
Rochester, NY 14607-3832

1080 VENEZUELA Barcelona 0015 9/12. YVOJ w/R. Barcelona ID and SS mx. Loud annihilating WTIC. [MC-MA]

1100 COLOMBIA Bogotá 0017 9/12. HJCN w/SS talk, shrill "Atención Bogotá" announcement, and Santa Fe mentions, rising above a graveyard-like imbroglio (several other SS's plus ZDK were clanking around in there. [MC-MA]

1160 BERMUDA Hamilton 0025 9/12. VS83 noted w/BBC nx relay o/u WSKW and others. [MC-MA]

1165 ANTIGUA St. John's 2335 9/11. Good w/man preaching in EE. [MC]

1170t VENEZUELA 2338 9/11. SS talk w/frequent mentions of Caracas, in mess. [MC-MA]

1170 HAITI Port-au-Prince 2344 9/11. 4VRS good w/FF reggae-style vocal, o/SS station after WKPE went off. [MC-MA] (nice - Jim)

1190 COLOMBIA Barranquilla 0030 9/12. HJCT atop channel w/SS talk, ads for Barranquilla businesses, mentions of "La Costa Norteña" (north coast), then news. [MC-MA]

1375 ST. PIERRE ET MIQUELON RFO, St. Pierre 0730-0805 9/22. Heard with what I presume was a morning program from France-Inter in Paris, including music, man and woman bantering, "Inter" (non-local) ID, strong pips on hour, brief news. I've heard this one as a tentative before, but now I'm certain. It faded badly by 0800. My "DX-Edge" says sunrise is just before 0800 in St. Pierre. I wish that I had been monitoring the frequency before this time to see if RFO rose up in the sunrise twilight, as propagational theories predict. I also checked RFO Cayenne 5055 kHz, which was much stronger, and found it // to 1375 at this time, which I had never thought about doing before when trying to ID this one. [JR-NY]

1610 ANGUILLA The Valley 2323 9/11. Loud w/EE preaching. [MC-MA]

TRANS-ATLANTIC

702 unID 2358 9/11. Het during Africa-only TA cx. [MC-MA]

765 SENEGAL Dakar 2304 9/11. Fair w/AA-sounding chant. Semi-AU cx tonight, only Africans in. [MC-MA]

1179 unID 2342 9/11. Strong het during African opening. Audio lost to QRM from SS LA (Ven?) on 1180. [MC-MA] (not much listed - Jim)

1197 unID 2346 9/11. Het during African opening. First thought is Agadir, Morocco, but Algeria B91 was barely noticeable so maybe it's a considerably farther south African. [MC-MA] (seems like a high power BBC relay came on in Southern Africa this year, not sure of frequency - Jim)

1349t MAURETANIA 2318 9/11. Het, too much WLNH-1350 slop for audio. [MC-MA]

1404 GUINEA Conakry 2348 9/11. FF talk, poor in WIDE-1400 slop. [MC-MA]

1467 FRANCE Roumoules 0409 8/8. Potent OC. >>>> 8/12: classical mx at low audio level on big carrier. [MC-MA]

1548t SPAIN 0406 8/8. Bits of classical mx. [MC-MA]

1566 SWITZERLAND Sarnen 0359-0400 8/8. Alpine mx, polkas, dixieland jazz, then GG talk, good. >>>> 0354 8/12: Alpine accordion mx, woman in GG, good. [MC-MA]

1593 GERMANY Langenburg 0258 8/10. Male GG vocal, fair in slop. [MC-MA]

Changes in programming status; reported by listeners

Welcome to the early Fall edition of Formats. Here in Fairfield County, WADS - 690 has returned to the air with a Portuguese format, ID'ing as "Radio Portugal" and "Radio Romantica" for the absolute lack of folks of that ethnic group in Ansonia, Derby, and Shelton. Now three of the four Bridgeport area AM stations are ethnic, with WCUM - 14350 full service Spanish, WDJZ - 1530 automated Spanish and Portuguese, and WADS. WICC - 600 is the only English AM station in Bridgeport. And less than ten miles away in Hamden, local WXCT - 1220 has dumped its BRN Business News for Hispanic programming for the large Spanish population in New Haven.

And as noted on our annual vacation, most AM stations north of Boston are either automated, satellite fed (cuts down on the personnel bill), or relays for FM stations. They are, for the most part, quite boring. And as Eric Bueneman notes in a letter, many of these stations do NOT offer the unique services needed by the local cultures and towns up in these parts. If I own a small business in Berlin, NH, Brattleboro, VT, or Lewiston, ME, I am going to buy time on a satellite - fed radio station? Come on, now! I would go for FM or the local paper.

The M Street Journal notes that WMNT - 1520, in Garden City, GA is silent and for sale, CHEAP, as they could not hire a staff. And the same publication noted that WYUT-1420, Herkimer, NY, is silent, being evicted from their studios while they were on the air!

Our contributors are the M Street Journal, Eric Bueneman, Al Holtz, Mike Hawk, your editor, while on vacation, and new contributors Mitchell Scott Paul and Morris Sorensen. Morris and Eric likewise bring us Dial Scans from Winnipeg, Gainesville, GA, and the northern Atlanta suburbs. And your editor Dial Scans Portland, ME and the Bridgeport - New Haven, CT area. Here we go.

- 550 KUSA MO St Louis - CWM "Country Five" (MP).

 1500 WFIW Milford - Religion, gospel, some ethnic on weekends.
 1530 WDJZ Bridgeport - The birthplace of MYL is now a mixture of Spanish and Portuguese programming relayed from 1490 in West Springfield, MA...

All for now except Al Holtz's wife, Jane advises that she heard that some AM station in Florida has formatted ALL CHRISTMAS MUSIC 365 days a year - more information when I get it. What a fine column you folks have produced. The entire NRC thanks you.
 And as the DX season is fast coming upon us, do continue to support your FORMATS columns!

Facts About NRC's DX Audio Service

The DX Audio Service provides the ONLY monthly broadcast news cassette service to the DX community. Available to anyone anywhere, it is designed to inform the radio listener in a pleasing and informative manner. Many of the announcers on the service are professional broadcasters giving their free time to give the listener the finest service available.

DXAS was started to provide broadcast information, both AM and FM, to the visually-handicapped DX listener. It has evolved into a service which provides useful material to all types of listeners. Many subscribers listen to the tape to and from their place of work while driving.

One-year subscription, subscriber keeps the cassette each month: \$25. Sample copy and back issues of DXAS: \$3

Cassettes are mailed by First Class mail, on or about the 20th of the month. For information, subscriptions, renewals, sample copies: write to NRC DX Audio Service - P. O. Box 24 - Cambridge, WI 53523-0024. For back issues: NRC Publications.

The 1991 Bridgeport Convention

by John Malicky; photos by Paul Swearingen

Finally it's here, the 1991 NRC Convention in Bridgeport(Clarksburg), West Virginia! One year after Pittsburgh, there will be no late arrivals on my part as in past conventions. Instead and as planned, I wind up a circuitous 300 mile eight station tour at WHAW-98 Weston, WV and arrive at our '91 NRC site, the Bridgeport Holiday Inn, this late Thursday eve. My first encounter is with members Ernest "Lefty" Cooper and Mike "the Sunshine Kid" Lantz discussing DX, other radio tidbits, and why the Mets have fallen into mediocrity! Soon making his presence is our host and star of this year's show Bill Swiger who later attempts to find a new member, Al Buckalew, from Tinseltown/Los Angeles as we will meet him tomorrow. Before the night is over, there's just a little more excitement. By accident while phoning home, I happen to catch sight of the small parade of women from dressing room to the hotel's club for the weekly ladies longerie show. This was to be one of the NRC '91 scheduled events, but was cancelled for lack of interest-hi!

It's now 8 AM, Friday August 31, the humid foggy air begins to give way to the bright morning sun with the official start for Bridgeport '91 just a few hours away. Already I've planned a 5 station stop in and around Clarksburg beginning with WPDH-750/104.9. As mentioned in previous DX News, the coinciding 13th annual Italian Heritage Festival downtown is also taking shape. By chance, I find the WOBG-1400/105.7 booth and meet P/GM Bob Hilber and Roni Davis! Bob is pleased that I've arrived and has received my advance notice by postcard to visit his station. Just before noon, with studios on old route 50 east, I find their DJ Don Niles signing off his oldies show for the day. An avid FM(and parttime AM) DXer, Don and I enjoy lunch at his favorite Chinese restaurant(and mine now, too!) while he mentions of stopping by the convention during the next two days and may even consider joining our club!

By midafternoon with temperatures around 96 degrees(now we're cookin'-hi!), several of the members begin to arrive. First, it's Bill Townsend whose trip here took some time as he walked from Washington, D.C.-hi! Then my roommate and Pittsburgh(Verona) NRC'er Chris Cuomo also checks in arriving via bus, not by foot! In Hospitality Room A, warm greetings are extended to Gaye and Jack Parks(Hamlet, NC's finest DXer and probably the only one, too!), Martin "aren't overseas luggage checkpoints great" Wisniewitz, Glenn Cooper, Frank Merrill, Charlotte and Kermit Geary, Chuck Rader, "Krazy" Ken Chatterton, and Corning, NY's Betty Lord. Early evening saw more visits from Paul "Mr. DX Quiz" Mount, George "Traveling Man" Greene, Warren Greenberg, Ernie "Captain Video" Wesolowski, Paul "no John, I won't type your convention summary" Swearingen(who sometimes is our DX News Editor), Jim Wallace(late of WWVA-1170 now with WV Public Radio and the Ohio State Buckeyes #1 fan!), Linda and John Bowker, and Bruce "you'll never believe what happened to me today" Conti. A fine crew indeed!

Returning to just before evening, three short and unrelated events are occurring with myself and Martin Wisniewitz, the Bowkers, and Bruce Conti. First with Martin and I, even with expected failure, we attempt to obtain station visits for the members for Saturday from WDTV TV 5 and WBOY TV 12. Adjacent to our hotel is the WDTV studios and microwave tower sending a signal to their main tower several miles south in Jane Lew, WV. Downtown at WBOY, we at least have a pleasant conversation with GM Gary Bowden who seems genuinely interested in our convention and hobby. Meanwhile, out "on the road again" are the Bowkers as John tunes in for clean static free airchecks. As their last known address was in Princeton Junction, NJ this past June, now it's wherever their huge RV with car takes them, soon in a few months to Sun "Retirementville" City, Florida. So if you happen to see a man under a big oak tree in your neighborhood park with receivers, antennas, and wires, ask why and he'll respond, "well you do understand the hobby of collecting stamps...only I'm collecting radio signals/airchecks, now leave me alone!" Then you've met John-hi! Also on the road in the midday heat, literally burning up in his nearly overheated '84 Thunderbird, with only 180,000 miles on it, is Bruce Conti fast approaching Morgantown, WV on newly named I-68. However, soon at Fairmont on I-79, Bruce cools(?) off during an intense thunderstorm that's left several accidents before him. Welcome to West Virginia Bruce-hi!

As our first day winds down, NRC(designated as such by husband Bill!) Convention Secretary Brenda Swiger runs errands and makes the members feel at home, complete with the good china and place settings-hi! Meanwhile in uniform, Bridgeport H.S. football cheerleader and daughter Erin Swiger leads the group in a club cheer, "gimme an N.. gimme an R..gimme a C, gimme an N..R..C!!"

Early Saturday morning, August 31, more members now join the festivities. First, 4 new members are greeted. They are Karen and Hugh Montgomery of Bethel(Cincy), Ohio, Jim Wilhelm of nearby Fairmont, Bob Carlson of Vincent, Ohio, and William Via from Baltimore. Thanks for coming folks! Next of DX Audio Service fame, it's Fred Vobbe accompanied by wife Debbie and daughter Connie. Then yawns and stares(?) greet NRC Pres Mike and Sue Knitter as Mike's only real reason for being here was that he'd have a whole weekend off not answering the long-distance calls-hi!

Left - Fred Vobbe demonstrates the different properties of loop antennas as a four-foot loop looms in the foreground.. Right - Krazy Ken Chatterton, foreground, appears rather placid during the technical talks!

Also making his yearly appearance all the way from New Zealand, the Kiwi man himself, Laurie Boyer! Even the doors stay open as the NRC's Swat Team checks in with Jerry "AM Switch/Hot 101 FM" Starr, Alan Merriman, and Ed "Pigeon Jones" Krejny. Outside, a sizable public gathering curiously watches as a strange red van, covered entirely with bumper stickers, pulls into the hotel parking lot. Why it must be Dave Whatmough! Finally, having met previously last year, is Ed McDonald of Morgantown. Though unaware of my WAJR-1440 visit in Morgantown on Tuesday past, Ed mentions his show, "Side Tracks" two hours of bluegrass music from 5-7 PM on Sundays over WAJR, will be pre-empted for Steelers football and moved to Labor Day Monday at 10 AM.

Soon two developments occur, one takes off, the other is shot down. First, too much of an exact schedule of no more than 15 written names with a 24 hour advance notice has caused cancellation of touring Clarksburg's 911 Center. However, Brenda Swiger and several of the wives/women leave at 10:30 AM for the Arts & Crafts Jubilee with a Civil War Reenactment. Upon their return, Ernie Cooper's quip is that he planned to miss that trip because he already knew the outcome of the war-hi! Still, to pass the time, several members use their special '91 NRC 3-D Glasses(?) to view Ernie Wesolowski's 3 day old video of the WLW and VOA-Bethany transmitter sites in Hospitality Room B.

Promptly as scheduled at 1:30 PM also in Room B, the NRC Technical Talks begin with with Professors (John)Bowker and (Fred)Vobbe with written exams to follow-hi! First, John starts with a short lecture and overhead pictures on the history of radio. Fred follows with a talk and demonstration on passive and active antennas. Without the use of batteries, passive ones shown were John's cheap Select-Antenna and Bill Swiger's 4 foot loop. Next were Fred's active homebuilt ferrite bar models. Fred mentions his new model will sell around \$180, then it will give way to a new design later. The third of the talks was John's interesting lecture on Digital Audio Broadcasting, or DAB. The basic premise is that DAB will eventually reproduce the sound quality like that of cds and completely alter AM-FM broadcasting. Thus, within a local area and radius of 40-50 miles, 12 stations would share a single tower and transmitter, with a 2/1000 second pulse, to broadcast a clear, clean, and crisp signal. Though outside this radius, there would be a degradation of a complete signal dropout. Coming events for DAB include the Canadians transmitting via satellite by next year and later this month September in San Francisco, KQTT will test the system under the name "Project Acorn." By February 1992, all this will come together at the international radio conference in Spain. If signed by President Bush and put into action by the FCC, DAB could become reality by the year 2000! A radical change in the way we DX, too! Also, John pointed out many key issues are still there for the FCC to answer. They include what will be the frequency limitations as he mentions a 30 mHz plan for 98% of all broadcasters(currently AM has 1 mHz, FM 20 mHz), signal degradations, what will be the power limits, how will the U.S. manufacturing of receivers be handled, what channels will be set aside for educational programs, who will hold the license for a single transmitter, what will the costs be for broadcasters and consumers, and if there are satellite broadcasts who will hold the license for these. Stay tuned to your DX News!! Finally after a short break, Fred has returned with a discussion and demonstration on the construction and assembly of long-wire antennas. Distributing plastic insulators(dogbone and egg) that replaced porcelain, Fred also reveals an impact resistant spring insulator that would allow a wire to stretch and withstand heavy ice formations in winter. Its design was prompted after Fred's employer, WLIO-TV in Lima, Ohio, felt the brunt of an ice break through the roof this past year!

It's now 6 PM Saturday evening as Mike Knitter now addresses the membership with new and updated NRC Business. The topics include: membership is stable at 740 with 15-20 new members replacing the same number who drop out so the magic number of 800 is not yet in sight; the soon to be again in print "brand new and improved!" NRC Night Pattern is now being assembled by computer whiz and member Sam Tankersley of Glendale, AZ, so grab and send all those schematic and/or advertiser coverage maps to Sam today!; the exciting and creative NRC DX Audio Service on cassette tape continues to grow so well coordinated by

Fred Vobbe that it shines over other bland blind services, putting a few out of business because they couldn't match the quality of ours, and causing "our feet to finally get in the door" (and someday kick it down!), with the popularity rising such that 60% of that membership being sighted; NRC Publications have reached into Europe via DXF in Finland so now those overseas members and other DX clubs can purchase items through DXF for a lesser cost; a confusing state, though somewhat amusing, is that NRC state of New York members must pay NY sales tax for books, etc. if ordering by mail through Mannsville, NY, but not on credit card orders through the NRC phone service in Wisconsin, while Wisconsin members are taxed the opposite!; since the post office has decided that all DX News be taped before mailing, a slow process on our side, all addresses must now have a nine digit zip so that they can be "bar coded" for faster delivery, though some DX News still arrive late to members (Alan Merriman, a D.C. postal employee offered his assistance to look into this); Chris Cuomo mentioned the idea of publishing a 60th anniversary NRC book for next year as Mike said there are still a few of the 50th ones left for sale (also on the topic of anniversaries, Mike and Sue will celebrate their 20th wedding date October 2, so send those cards and letters!...and tomorrow Charlotte and Kermit Geary would celebrate their 50th and be presented a cake, though my apologies as my Pittsburgh '90 picture book mentioned last year was their 50th, well at least I mentioned it-hi!); and finally Rick Dau of Iowa, though he could not make Bridgeport, phoned in his '92 bid which was accepted, first for Davenport "Quad Cities", Iowa, then later changed by Mike to Des Moines (WHO Land) because of better airline connections. Afterwards and through tomorrow, "Krazy Ken" (though he's really very mild-hi!) Chatterton holds out his tin cup for purchase of the new NRC AM Logbook (\$15), FM Logbook (a much improved and better version for \$12), and Bill "DDXD" Hale's new NRC Station Map Book (\$8).

Following the NRC Banquet in the Coal Room (with a coal stove to match-hi!), plus glimpses of the Pitt(34)-WVU(3) blowout in Morgantown, I now join everyone back at Room B for the "infamous" NRC Auction hosted by a pleasantly subdued and amusing presenter, Sue Knitter! As Sue knows, and Brenda Swiger and our new members will find out, why would anyone purchase most of this worthless junk? NRCers do! (it in the dark-hi!) My donations include 2 Bridgeport WDCI-104.1 (on as of June 29) cups, a WYTK-95.3 shirt and hat, 2 NRC Pittsburgh '90 pennants and books, and the leftover ham oriented gear that went unsold last year, but figuring that it would be bought by a gullible host(?) prompting Brenda to lock Bill out of the house if he bought anymore stuff! Prul Swearinger wanted to fly here on another auction item, the 1,900 exWREN-1250 bird, but had difficulty taking off-hi! Total for the bidding came out to \$233 which included my possible high of \$48.50 selectively snatching at the last second a much wanted WVVA shirt (that I missed last year), an exaggerated comical version cloth map of the world according to New Zealanders (I wonder who brought that-hi!), an '89 M Street Radio Directory (sorry John Bowker!), and a large plastic "Majic 102.5" WVUQ banner from Chuck Rader, though he wouldn't say how he got it! However, the highlight of the bidding was our newest and youngest bidder, 5 year old Connie Vobbe, who along with daddy's help (and money!) is on her way to becoming a promising and gambling NRC Auction Bidder!

After the Sunday morning September 1 NRC Brunch back into a divided Coal Room (Hat-fields on the left, McCoys on the right!), most members return to school, again, in Room B for Headmaster Paul Mount's challenging and fair NRC DX Quiz! As Ernie Wesolowski's video camera pans a room of mostly dumbfounded NRCers (mostly me!), Frank Merrill was busy attaining a high score of 67 and receiving 2 NRC stamps plus some expired NJ lottery tickets-hi! My only question concerning the procedure was, why couldn't Ernie show us more of Frank's test? And now, congratulatory wishes go out to Paul and his "very DX understanding" fiancée, Carol, as next April 20th wedding bells will be ringing, and we're all invited, see you there!

Left - Auctioneer Sue Knitter invites convention-goers to take a piece of West Virginia home with them during the annual auction. Right - Dave Whatmough's "Magic Bus" is a rolling catalog of radio station bumper stickers.

Left - The youngest NRC DX'er? Daughter Connie Vobbe tries out the earphones for fit while father Fred gives beginning lessons in DX'ing. Right - Convention hosts Brenda, Erin, and Bill Swiger appear none the worse for wear during the last day of the Bridgeport '91 NRC Convention.

Following the quiz, Jerry Starr lays out an impressive sequence of several rapid snapshots of the demolition of exWFWJ-1390's 6 tower array from last month. Amazingly, as the last tower would not fall, Jerry had to pull it down-hi!

A break in activity and an afternoon of free time follows with just a short demonstration of Alan Merriman's phasing unit. This would now be a great opportunity to locate a "golden treasure", the WMMN-920 3 tower array which I could not get to on Wednesday past. Embarking on this expedition with me is Bruce "Admiral Perry" Conti. Twenty miles up to Fairmont and southwest along route 19 to Monongah, we abandon car, climb a steep dirt road, sidestep the dangerous 4-wheel drive Mon Power drivers, traverse through a DX graveyard (a real cemetery folks), and finally reach our destination! Within sight of member Jim Wilhelm's home (as the trek is no big deal to him-hi!), the 3 huge self-supporting towers are in a northeast alignment. Fighting back tears (of sweat, it was hot!), we record this moment hopefully for our DX Audio Service members and place the official NRC Swat Team flag (of a pigeon!) atop the transmitter building! This was our own version of a NRC Scavenger Hunt, though without prizes, but knowing, who else would want to spend a beautiful Sunday afternoon doing this?!

Later as the Italian Heritage Festival begins to wind down, so does NRC '91. Early evening finds new arrivals Ruth and Carrol Weyrich stopping by in Room A. If a young DXer were to eavesdrop, they could listen in on the great amount of QSLs attained by Carrol, with 1,720 AMs, Ernie Cooper with an exact total of 5,000 (4,381 AMs and 619 FMs), and the granddaddy of all, Kermit Geary with a whopping 6,120 AMs, 115 Cuban! Meanwhile, my time is spent with Mike Knitter picking his brain on current NRC procedures and his wallet-hi!

Our final scheduled event at Bill Swiger's residence (map not provided!) is a Sunday evening beverage session under a very colorful sunset turning into an overflowing starlit sky! These are the only real highlights as 16 members find no real catches on Alan Merriman's Kenwood F-5000 and MWDX-4A phasing unit. Bill tries to holster the DXing with his HQ-180A, but still no results. The activity is there in the nulls, but not enough to overpower the regular night locals. Later, some of us view Bill's downstairs ham shack.

A warm Monday morning September 2 at 10 AM saw many members begin to depart as I'm off to run a 5K (3.1 mile) "Great Duck Race" in Clarksburg's Riverbend Park. Arriving back at the hotel, there is one last surprise, a visit from member Harley DeLeurere from nearby Hendricks, WV! Meeting for the first time ever, Harley and family were on a 3 week trip to Indiana, Wisconsin, and Canada. Upon returning home, Harley made time to squeeze a short visit in today. As I am most appreciative for Harley's written directions for several of my WV station visits, I was glad you came sir, even for a short time!

At 1:45 PM, it's a short 100 mile trip home for Chris Cuomo and I bidding goodbye to another NRC Convention, Bridgeport '91! Many thanks to our host Bill Swiger, wife Brenda, and daughter Erin. 37 members convened and 49 people total enjoyed the company of each other. Hope to see many more of you next year at NRC '92 in Des Moines!!

Attending Bridgeport '91 were Buckalew, CA; Townshend, DX; Lantz, FL; Merrill, IL; Swearingen, KS; Via, Weyrich, MD; E. Cooper, G. Cooper, Greenberg, MA; Wesolowski, NE; Conti, NH; Mount, MJ; Chatterton, Lord, Rader, Wishnewitz, NY; Carlsen, Greene, Krejny, Montgomery, Starr, Vobbe, Wallace, OH; Cuomo, Geary, Malicky, PA; Merriman, VA; DeLeurere, McDonald, Swiger, Wilhelm, WV; Knitter, WI; Whatmough, ON; Boyer, NZ, and Bowker, all over the U. S.!

The Answer Man

Got a question about radio? Send it to NRC's Answer Man: Russ Edmunds - 753 Valley Rd. - Blue Bell, PA 19422-2052. No question is a dumb question, and Russ will answer all, from basic to highly technical. Watch for the answer in DX News!

The Drake R8 - A Quality Control Nightmare?

(Seldom before has any receiver like the Drake R8 caused such a stir since its release in early summer 1991.

First reports from *Monitoring Times* columnist Larry Magne were favorable; he merely grumbled a bit about unfriendly ergonomics for fat-fingered DX'ers. An early impression from an anonymous writer in the June 3 DXN merely listed specs provided by Drake, but Rob Keeney's review in the August 26 DXN was quite favorable, pointing out low background noise and, like Magne, pleasing audio quality, plus its low (under \$1,000) price.

NASWA's Guy Atkins sounded the first real warning notes in the August, 1991 *Journal of the North American Shortwave Association*, pointing out the flimsiness of the metal case. Other DX'ers began sending in reports to various journals, commenting favorably about the DX capability of this receiver but also pointing out various small problems in quality control. Although one can make a case for some DX'ers being pickier than others, accounting for diversity in reports on

the R8, the emerging picture began to be of a well-designed radio, superior in many ways to older radios, but perhaps one which has not had all the bugs worked out in it.

The two reports which follow, from two NRC members, were written independently. One member rejected his receiver, for various reasons not related to the DX capabilities; the other had no major complaints. We would simply warn the purchaser of any receiver, not just the R8, to be certain of the manufacturer's warranty and to check it out thoroughly within the allotted time. And we would remind the Drake company that, as one of the last major U. S. manufacturers of quality DX receivers, the entire DX community is looking to you to provide high quality equipment which is free from problems. The consensus of reviews now indicates that for quality control the Drake R8 rates at about a "C-". We're looking for an "A" rating; can your production lines provide it? -pls.)

R-8 Impressions by John R. Tow

I have just had the good fortune of briefly comparing the new Drake R-8 receiver with a new Icom R-71A, a recent production stock JRC NRD-525, and my much modified NRD-525. The newest receiver, the R-8, is the first American made solid state receiver since Ten Tec's abortive attempt several years ago. R.L. Drake has previously produced two excellent and nearly affordable receivers, the SPR-4 and the R-7A. I have owned and used an SPR-4, but never an R-7A. National pride has made me regret the sale of my SPR-4 for some time.

An ex-student, Rick David (WC4Q), called me to tell me about his latest acquisition, the Drake R-8. He was concerned about the apparent distortion his receiver seemed to have on CW, his favorite mode (Rick still enjoys 20 meter mobile CW - he has a "bug" mounted in his car's center console!). His R-70 did not share the distortion, although its up was occasionally acting up. Rick had also borrowed a new R-71A from work for comparison. He asked me if I would help him evaluate the receivers! I jumped at the opportunity!

The R-8 is an attractive receiver. It would look good on your desk in the den or office. If you are accustomed to heavy receivers with strong cabinets to support accessories, you are in for a shock. The top and sides are formed in a U shape and constructed from a piece of aluminum about a gauge thicker than oven wrap! The flip down feet are very fragile looking plastic pieces unbefitting a receiver of this caliber. The top is easily removed to reveal, thankfully, a much heavier construction inside.

The front panel is thoughtfully arranged. The push buttons have a good rubberized feel, albeit a bit narrow. The main tuning knob is well made but small. The feel and mass are appropriate for spinning. The LCD readout is back-lit and not easily read unless viewed from directly in front of the receiver. Certain angles and strong side-lighting will make for difficult viewing. The S meter is an analog type.

The receiver's controls are a bit different. The push buttons are all dual function requiring a 'shift' button to be pressed before the secondary functions would be displayed or changed. The "SYNCHRO" button has an indicator light to show when it is on - not when it is in lock or not. The synchronous detector circuit will switch off whenever the received frequency is

changed. The tone control is concentric with the squelch control and seems to have little effect in normal listening. The internally mounted speaker is top notch in quality. Unfortunately, the cabinet does resonate and produces distortion. The audio output level is low when coupled to a RS Minimus 7. The output is apparently intended to drive 4 Ohm speakers. The external speaker is connected via a 1/4" phone jack and controlled by a back panel slide switch. The line output is quite high, like the NRD-525. The headphone jack will take a 1/4" stereo headphone plug, although the level is too low to drive the Koss HV-1A 'phones to anything but a low level (Again like the unmodified NRD-525!).

On to the back panel. The receiver has two coaxial inputs (SO-239's in place of the horrible RCA jacks used on so many previous Drakes!) and a Hi-Z input representing a good selection of inputs. The line cord must be permanently attached - I don't remember attaching it to the set. It is of the two circuit (no ground) type. The DC connections are conveniently located for battery operation (My choice!). A DB-9 connector for the RS-232C interface, mute connection, and timer connections are also present on the back panel. One definite oddity on the back panel is the label with the country of manufacture!

We opened Rick's radio to see if something was loose near the speaker and thus resonating with the CW chirps we were receiving. We noticed several interesting design features, but no loose items. The resonance was in the upper case. The speaker, as mentioned, is excellent and appears to be about 3" or so with a large magnet. To its left and forward, actually just behind the front panel, is where they decided to locate the power transformer. I do not like having 120 VAC just behind the front panel. The imported receivers have the edge here. The circuit boards visible from the top appear to be of above average quality with excellent quality components. A 2N5109 transistor with a heat sink attached can be seen at the rear of the main board. This transistor is normally used as a CATV wideband amplifier and is known for being nearly 'crunchproof' and is most likely the preamp stage in the R-8. The board had more diode switched input filters than I have seen in any HF receiver. Rick wanted me to hurry up and close the receiver up so we could continue our testing - with an external speaker, of course!

Functionally, the receiver has some well thought out default settings for the AGC and BW for each of the available modes. Unfortunately, as others have found and pointed out, it resets to those defaults whenever you change modes. Cycling through the bandwidths is also irritating to some. I could certainly live with those shortcomings. The notch filter is apparently an audio type instead of the usual Drake feature of a 50 kHz IF notch (a la the R-7A, R-4's, and SPR-4). The R-8's notch can apparently reduce a heterodyne, but the carrier meter doesn't budge. I did not test the scanning or channelizing features, however.

Operationally, the receiver is fun! It also sounds good! No boom boom bass a la the R-70&71A, NRD-515, etc. Little if any hiss (unlike the NRD-525!) is present. The receiver sounds quieter in the synchro mode, although this isn't born out in the low level tests. The synchronous detector doesn't always lock the first time it is engaged - a whooshing heterodyne can be heard while the PLL is trying to "lock". Once locked, the passband tuning can be adjusted to enhance one sideband over the other. Lock is lost once the frequency is altered. The synchronous detector permits near hi fi reception under most conditions. The preamp is easily defeated and a switchable attenuator is also provided.

The selectivities are well thought out for average listening. Critical DXers may want a 1 or 3 kHz range bandwidth. Since all of the selectivities are from a diode switched 8 pole 50 kHz LC filter, no changes are possible - no improvements or after market enhancements are probable! What you get is what you will have! Not bad choices for average SWLs and DXers, good choices for the ECSSB users, and decent selections for the utility monitors - just very permanent choices for all! The shape factor (SF) of the LC filters is quite good, but not equivalent to the ultimate selectivity provided by cascaded eight pole filters. The filters are all included - a definite plus when one considers the cost of "extra" filters today.

I connected the R-8, R-71A, and both NRD-525's via a 4-port hybrid coupler to an Alpha Delta sloper for comparison. The R-71A had some spurs at night on 49 and 19 meters with the pre-amp on. The other receivers were quiet - even with the R-8's preamp on. Weak 15 meter band signals were more readable on either the R-8 or the R-71A with their preamps on than the NRD's. The R-8 seemed to have the best AGC action with the the modified NRD second. The audio was cleanest on the Drake and more crisp on the modified NRD. The stock NRD was much more irritating to listen to than the R-71A (I cannot stand that hissi!). My familiarity with the modified NRD made it the easiest receiver to change from one mode to another. The R-8's resetting to default BW and AGC with mode change slows you down. Perhaps the memories would allow quicker changes - and comparisons. A longer use-test would reveal more operational shortcuts. Unfortunately, Rick had to pack up and head home (60+ miles) - and along with him went the R-8!

Which receiver is the best is the obvious question. The answer is simple - none! If you don't have a receiver in this price range, I would buy the Drake. The loss of the PBT on the late production Icoms (Our test sample, although new, was old stock - it had the PBT!) would take them out of my consideration. I would think twice about unloading a '525 or '71A merely to obtain an R-8 (or '535, for that matter!). Anything receivable on one receiver will be receivable on the others. I would consider the service life of the receiver in my choice. The '525 is the obvious choice here. Its construction is service-oriented, complete with built-in test equipment and modularization down to the front panel! The R-8, R-71A, '515, etc all share common large multifunction PC boards, a maintenance nightmare. The '525 permits easy fault isolation and remedy. A good example is in order.

During the tests, I found that in fact my receiver was malfunctioning on the higher frequencies. I had thought that 22 meters and up were dead this summer - they may have been less than optimum, but not dead. In comparing the receivers on Tahiti at 15,171 I found my '525 to be much weaker than the others - unless I bypass the front-end circuits ('PASS' mode), that is! I swapped HF Tune (CFL-205) PC boards between the two receivers and found that my receiver would once again function normally. Replacing the good board with an extender board and my original board, I was able to isolate the problem quickly. ICI, the 74LS145 decoder that drives the diode switches for the front-end preselectors, was holding Band 4 & 5 low. Replacing it with a socket and a new chip did not correct the fault. SMT bypasses C8 & C9 were reading low resistance (should be open ...), keeping Band 4 & 5 on. Replacing them with .01 uF 25 WV ceramics (Where can you find SMT caps on a Sunday?) and re-connecting my protective diodes in case the failures were RF-induced and my receiver was ready for service once again. Another comparison with the "good" board showed no difference in performance. Hooray for a serviceable product! Incidentally, JRC's excellent service manual for the NRD-525 indicates that ICI should be checked when low sensitivity is noted in one band (pg. 3-3). I wish I had read the troubleshooting section first ...

Will I purchase an R-8? I hope so. My financial situation at present will prevent any purchases of substance for some time to come (My current "hobby" is putting my youngest son through college!). I would not sell my NRD-525 to purchase one, however. When compared to the mid-seventies \$695 price of the spartan coverage SPR-4 or the early eighties price of \$1649 for the basic R-7A, the R-8 is a steal - and it is complete.

Drake R8 Receiver: Promising Or Fatally Flawed?

Dallas Lankford
September 14, 1991

What should have been an enjoyable experience, trying out my new Drake R8 receiver, has turned into a giant headache.

After placing a phone order with Drake on August 30, I waited patiently for the R8 to arrive. I should have become suspicious when it did not show up a few days after Labor Day. But I did not. And again I should have become suspicious when I found a Fed Ex notice of attempted delivery at my home on September 11. There is no Fed Ex office in Ruston, so it was either take

time off from work and drive the 70 mile round trip to the Fed Ex office in Monroe, or take time off from work and wait for Fed Ex at home. I did the latter. When Fed Ex delivered the R8 about 10:30 on the morning of September 12 I should have taken a close look at the Fed Ex label on the box, but again I did not. When one orders a product from a company, one expects the product to be delivered directly to one. Only later as I was repacking the R8 to ship it back to Drake did I discover that "my" R8 had been shipped to someone in California, and that that someone had shipped it to me. Clearly there is something terribly wrong in Drake's shipping department and with the procedures they follow. There is no way anyone in their right mind would accept delivery on a \$1000 piece of equipment from a third party when it was supposed to be shipped directly from Drake to the customer. As yet Drake has not explained how this unacceptable situation came about.

Since I had not yet noticed that "my" R8 had been in the hands of an unknown person or unknown persons in California, my evaluation of the R8 started on a promising note. I connected an amplified ferrite rod loop antenna and checked out the daytime MW band. No digital circuit or display noise! At least none unless you brought the loop within a few inches of the display. It seemed to be a winner for MW listeners. Actually I should mention that at first I thought previous reviews were wrong in this regard because I got quite a lot of display noise with the ferrite rod loop powered from an AC power supply. But when I switched over to a battery, all the display noise went away. Apparently some display noise couples through the power cords when using an AC power supply to power an amplified loop.

Next I switched over to my 2 foot balun loop. Gain was a bit low using the R8 50 ohm antenna input, so I switched over to the 500 ohm antenna input and found that gain was fine. This is not the fault of the R8. The U-310 amp gain for the circuit of my balun loop depends on the load it sees. I do wish that Drake had used an SO-239 or BNC connector for their 500 ohm antenna input instead of the quick release push-in terminals. I had to use a BNC to binding post adapter and two short lengths of wire to connect the loop coax output to the R8. But on the other hand, at least all of my high dynamic range loop amps will work directly with the R8.

After satisfying myself that the R8 emits little or no display noise in the MW band, I changed over to my noise reducing inverted L antenna to tune up and down the MW band looking for any anomalies. Right away I found one: a curious bagpipe-like het around 1590 KHz. What was it? Was it being emitted by the R8 and being picked up by the inverted L antenna, or was it due to some other cause. A quick check with an R-390A showed that it was not being emitted from the R8. Closer examination of the het on the R8 revealed it to be an image of my super local KRUS on 1490 KHz. Ugh! The image was actually about 1592 KHz, which indicated that the R8 50 KHz IF was not properly aligned. Next I connected a signal generator to the R8 and measured the image rejection at 700 KHz (image at 802 KHz) and at 1300 KHz (image at 1402 KHz). In both cases the image rejection was about 52 dB. Thus "my" R8 failed to meet Drake's image rejection spec of greater than 60 dB below 1.5 MHz.

I phoned the Drake people and was told that the problem was probably a defective 45 MHz crystal filter, and that they would be glad to have me return the R8 and fix the problem and return it to me. At first I agreed, but later changed my mind (as you will understand when you read the following). In my opinion Drake has the wrong policy with regard to defective equipment. I had purchased this R8 because of the 15 day money back guarantee. But what should one do when one discovers a serious problem with the R8 during the first hour of use? There is no way a customer should have to play "Fix It" with the Drake service department. A defective receiver should be replaced immediately by Drake, at no expense to the purchaser, and the 15 day money back policy started over with the second receiver.

Oh well, I thought, I'll play around with the R8 the rest of the day before I box it up and return it to Drake to be fixed. Next I decided to measure the image rejection above 1.5 MHz. Drake's spec for that is greater than 80 dB. I got 52 dB again. Disgusting! So I called them again to report this problem. They seemed to think that again it was the 45 MHz crystal filter. Hmm. I don't understand how a single problem, such as a defective 45 MHz crystal filter, can cause two wildly different departures from Drake's specs. Perhaps if Drake had provided a schematic with the R8 I could figure it out. That is another thing I don't like about these early R8 receivers. You don't get a schematic. Does that mean that the design is not fixed yet?

Anyway, I pressed onward with my evaluation of this ill R8. Maybe the dynamic range would be OK, thought I to myself. No such luck. The dynamic range measured 88 dB, at least 3 dB below Drake's spec of greater than 90 dB. Well, what about the 3rd order intercepts? The 20 KHz spacing 3rd order intercept almost made it at +5 dBm (Drake says greater than +5 dBm), but

the narrow (5 KHz spacing) 3rd order intercept could not be measured because of synthesizer phase noise. A bad situation was getting progressively worse.

I tried out the notch filter, but it did not seem to work at all with on-the-air hets. I switched over to two signal generators and generated a stable well-defined het with the two signal generators to see if I could get any insight into the notch filter problem. It appeared that the notch on "my" R8 was so narrow that it notched only an extremely narrow range of the het spectrum, and so it would not significantly reduce the het. All it did was change the tone of the het.

Oops. This story is getting out of order, which is, I suppose, appropriate for the "out of order" R8 I was sent. While I was measuring the SW image rejection, I was tapping the side of the case with my finger (I was annoyed). Accidentally I tapped one of the case mounting screws and noticed that it was loose. I inspected the other case mounting screws and discovered to my surprise that they all were loose. Even worse, one of them had been "roughed up" or "gorilla-ed" as I like to describe this kind of abuse. Someone had been inside "my" R8 and that someone did not know how to use a Phillips head screw driver correctly!!! My annoyance went up another order of magnitude.

What next? I decided to try out some headphones. The front panel headphone jack was defective. It was difficult to insert the headphone plug completely, and the headphone plug did not make positive contact with the headphone jack. The headphone jacks on the R8 (there are two of them, one on the front panel and one on the rear panel for an external speaker) are apparently plastic encapsulated PC board mounted variety, not the old fashioned (and sturdy) type. Had someone damaged the headphone jack, or was it merely defective? I don't know. The rear headphone jack also seemed defective. Audio output from the front panel headphone jack seemed inadequate. Audio output from the rear headphone jack (for an external speaker) was adequate. Perhaps this R8 has a defective audio amplifier.

Could anything else be wrong? Yep. On strong AM signals there was an annoying "click" as the 1 KHz digit changed.

And "my" R8 was afflicted with the same "rogue het" that afflicted Richard Eckman's R8. (Could Drake have sent me Richard Eckman's reject without fixing it?) On strong AM signals (I didn't check SSB or CW) there was a weak but very definite het which varied in frequency and amplitude. The rogue het was much more apparent when I used an unmodulated RF source, i.e., a signal generator.

To confirm that the problems I experienced with "my" R8 are not common to all R8 receivers, I phoned a well-known DXer who owns an R8. Although he could not confirm that his R8 met Drake's specs, he had not observed any symptoms of substandard image rejection. His R8 did not have a rogue het, or defective headphone jacks, or annoying click when the 1 KHz digit changed in AM mode, or gorilla-ed case mounting screw, or defective notch filter, and his R8 was not shipped to him from a third party.

There is absolutely no excuse for a \$1000 receiver to have so many problems. Many of these problems could be detected in a few minutes with some very simple tests by a competent technician sitting at the end of the production line. It appears that Drake doesn't test their R8 receivers at all. Or if they do, then either their test equipment is defective, or their technician is incompetent.

What can an R8 owner do if he thinks he may have a defective R8? If he has an R8 with a defective headphone jack, or a rogue het, or an annoying 1 KHz click in AM mode, or a notch filter that doesn't work, or gorilla-ed case mounting screws, then it is obvious that he has a problem and he should send it back to the Drake service department to be fixed. If he thinks he has image problems, he should try to verify it. One does not need a precision signal generator to measure the image specs. Just about any old signal generator will do. The R8 S-meter is reasonably linear in the sense that each S-unit up to S-9 corresponds to about 6 dB, and signal strength above S-9 is read in dB. I used a precision signal generator, and also precision 10:1 (20 dB) sealed attenuators to doubly confirm that the R8 S-meter is (or should be if it is operating correctly) accurate. Pick some frequency, say 2.000 MHz, adjust the signal generator to give a 40 dB over S-9 reading, and then tune the R8 to about 2.100 MHz. You should observe an image. If the image is not about S-2 or less, then you probably have a defective 45 MHz crystal filter or whatever the problem is which causes substandard image rejection. (At least Drake told me that the image spec failure indicates that the 45 MHz filter is defective. But since, according to Drake, the front end is varicap diode tuned, the image spec failure could also be due to front end tracking error, or perhaps some other cause.) Although measuring the dynamic range and 3rd order intercepts is not difficult, it requires two precision signal generators, and so is beyond the capabilities of most hobbyists.

I should add that the simple image test I described above will not give accurate results if your R8 S-meter is inaccurate. Here is a simple test which will give you some indication that your S-meter is OK. With an 80 foot inverted L antenna, 65 foot horizontal section about 20 feet above the ground or higher, and a 15 foot bare wire lead-in (no coax), at midday you should get about S-0 reading on a quiet day around 10 MHz with no signal tuned, just background noise. Unfortunately, in urban areas you may get several S-units of man-made noise. Then at night you should get about 60 dB readings from a few super-strong 6 Mhz (49 meter band) or 9 MHz (31 meter band) SW AM broadcasters. If you use a considerably longer antenna, or a different antenna, this simple S-meter test will not be reliable.

My advice to prospective R8 purchasers is caveat emptor, i.e., let the buyer beware. Most customers will not have an electronics laboratory in their home, like I do, and most will not have access to and ability to use the test equipment at an electrical engineering laboratory, like I do. If Drake offers to send me another R8 for evaluation on their 15 day money back guarantee policy, I will probably take them up on their offer. It is really a pity that they sent me a lemon, a fatally flawed R8.
